

## Hack Club

# GitHub

## What is GitHub?

GitHub is Google Drive for code. It's a website that millions of programmers use to store, share, and collaborate on code. GitHub is the industry standard when building software – it's used by everyone from hobbyists to software engineers at Google.

## Why does Hack Club use GitHub?

Hack Club always teaches students using real, industry standard tools so our alumni are always prepared to work professionally.

GitHub is the industry standard for working on code and, as a result, we bake it into our curriculum. Club members use GitHub every meeting to store, share, and collaborate on their projects.

## How do Hack Club members use GitHub?

Hack Clubs center entirely around project-based learning. Every meeting, club members work on projects and use GitHub to store and share their code with the wider Hack Club and coding community.

Every project worked on is also publicly shared on the club member's GitHub profile, building a public portfolio of their work that employers will look at down the line.

## A few companies that use GitHub:
